Attn: To whom it may concern

Subject: Policy SDS – Metal Products

An Article is defined in paragraph (C) in the following way:

(C) Definition: Article refers to a manufactured item:

- that is formed to a specific shape or design during the manufacturing
- which has an end use function(s) dependent whole or in part upon its shape or design during end use;
- and which does not release or otherwise result in exposure to a hazardous chemical under normal conditions of use;

This is to inform you that we believe that metal products meet the standards of the definition of an “Article”, as defined by the OSHA Hazard Communication standard and, therefore, are exempt from the requirements of these regulations data sheet.

The following metal products meet the definition of an article;

Aluminum, Stainless Steel and Carbon Steel (AZ55/60 or galvanized) bare or pre-painted metal jacketing formed into rolls or sheets, elbows, panels, wing seals, strapping, fasteners and accessory products.

- a) these articles contain no leachable hazardous ingredients
- b) articles are stable at temperatures up to 450° F and to -50° F
- c) both bare and pre-painted articles are non-combustible
- d) when handling, cutting, grinding, drilling, and/or welding articles, wear protective industrial grade gloves, safety goggles or glasses or a welding shield and respirator for proper personal protection. Some of the pre-painted articles utilize heavy metal pigments (i.e. lead, chrome) all within allowable limits for industrial products. If any metal pieces are accidentally ingested or become trapped in an eye please immediately consult a physician and advise them of the materials being worked with.
- e) articles are 100% recyclable and stable for long term use and storage

For more information, or if you have any questions, please contact our sales team at (412) 348-0356 or info@burnhamins.com

Sincerely,
Burnham Insulation Sales, Inc.
